# SADAHARU AI

## The new revolution in crypto memecoins
## powered by video generation AI

This whitepaper provides in-depth knowledge about token distribution, Unique staking, Inflation/deflation mechanisms aswell as the technical aspects behind the AI platform

# INTRODUCTION:

Sadaharu meme is inspired from the mascot pet of Yorozuya an Alien dog who us often seen as a cute white dog, but can transform into a giant creature and gets even bigger than his current size when provoked. He now acts as savior of dog memes in cryptoverse, preventing invasion of alien memes such as Pepe, Milady and other Cats to reclaim his title as Dog God.

# WHAT IS SADAHARU AI?

Sadaharu AI is a platform to create motion imagery and memes using AI basic prompts with simple clicks for everyone to use. The platform is intended to be free for $haru token holders provided they hold a certain token threshold everyday while others can use the subscription package hence creating demand and utility for the token.

# $HARU Token

$HARU is ticker symbol for the native sadaharu token, which is distributed through limited time staking mechanism after which it is made progressively deflationary reducing its supply everyweek.

# TOKEN DETAILS:
## TOKEN SPECIFICATIONS

$HARU is built on ethereum erc20 protocol with future compatibility and adoption in mind. It has a unique limited time tier listed staking mechanism for distribution which will last 6 months after which token will reach its maximum supply making it deflationary once the platform is live with regular burns.

# TOKEN STAKING

The staking is based on limited time , tier based system which will last for 6 months only out of the maximum reward pool of 500million haru. The reward per day is dynamic and calculated based on number of users staking and locking period divided by total daily block reward which is roughly 2.77 million haru a day.

Minimum staking lock period is 7 days, tier two is 30 days and tier three is 180 days with 50% reward increment for each tier. So the longer and earlier you stake, more rewards you can earn.

# TOKEN DISTRIBUTION & DEFLATION

$HARU is distributed through staking and airdrops to the holders and presale participants. Once the token is implemented into AI platform each week out of the subscription fee 50% of $HARU are to be burnt and removed out of circulation forever

## Presale Allocation

50% Marketing: We believe continued marketing is key factor for growth so we will be allocation a lions share to marketing campaigns to ensure were visible everywhere, that we continue to grow our social channels and that we recruit the best ambassadors.

50% of funds are to be used for platform expense, exchanges and other partnership which would benefit the token holders.

# TOKENOMICS

The max supply of $haru is capped at 1,100,000,000 only.
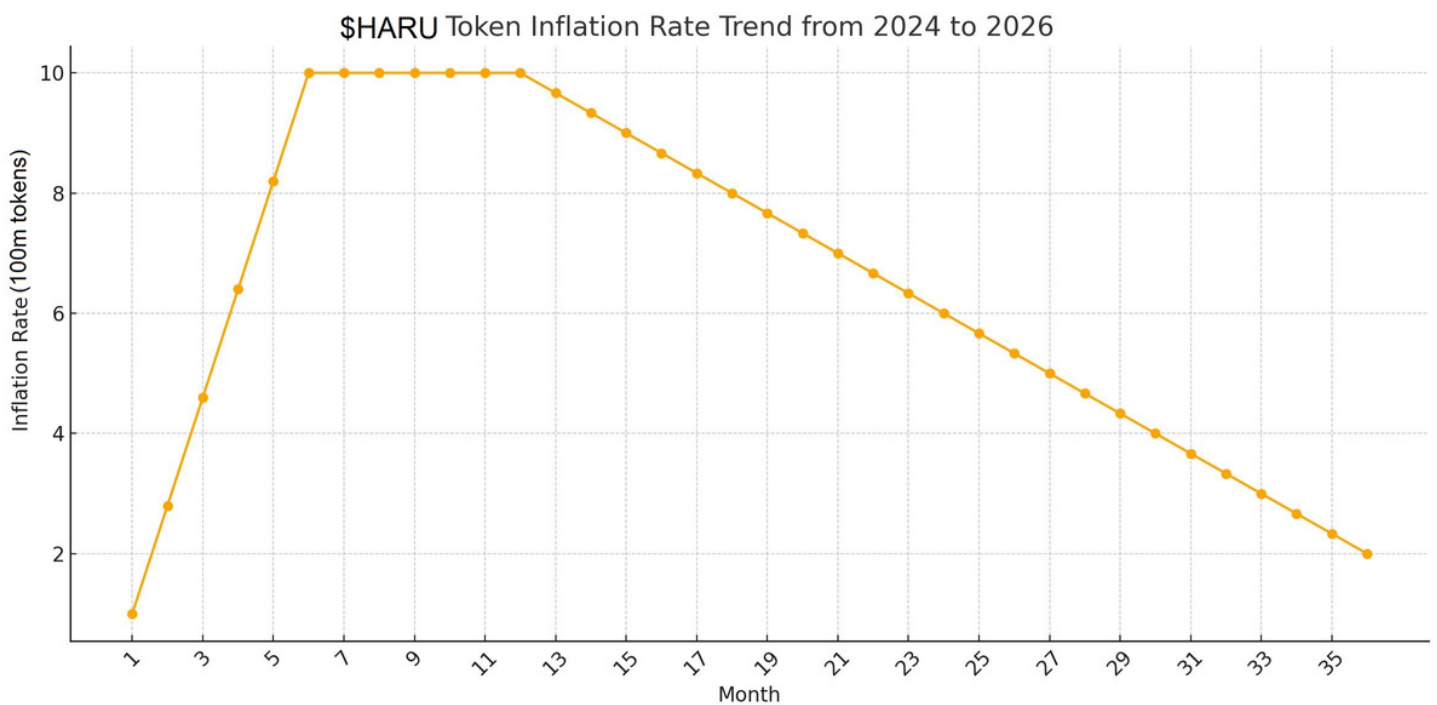

which will be distributed as follow

Presale (500,000,000)

Staking(500,000,000)

Exchange listings and liquidity(25,000,000)

Airdrops(25,000,000)

AI platform (50,000,000)

$HARU Token Inflation Rate Trend from 2024 to 2026

We want to emphasize the team is not intending to allocate any tokens for themselves and will solely run the project from sadaharu AI platform revenue. The contract ownership is to be renounced by the team after the presale ends to ensure trust and transparency for the $haru token.

# ROADMAP

## Phase 1

Sadaharu website launch

Community creation on social platforms

Presale Launch

Token generation and audit

## Phase 2

Marketing campaign launch

$haru limited time staking launch

Token launch with dex liquidity pool setup

Tier 1 CEX listings

## Phase 3

Sadaharu AI model beta launch

Sadaharu token integration into video generating AI

Marketing/partnership and awareness campaign in full throttle

Sadaharu on its way to achieve a billion dollar marketcap!
